

USQNB-IC

Urinary Symptom Questionnaire for Neurogenic Bladder – Intermittent Catheterization (USQNB – IC)

Researcher: The USQNB-IC is a validated measurement instrument designed to monitor urinary symptoms among individuals with neurogenic bladder who use intermittent catherization. The symptoms within the categories below are exchangeable and each category is considered different. Those can be used as outcomes for inclusion/exclusion and monitoring symptoms.

ACTIONABLE	URINE QUALITY
☐ Felt like you had a fever/feverish ☐ Increase in lower body tone, rigor, or spasticity ☐ Increase in frequency or increase in discomfort associated with bladder spasms ☐ Increase or change in quality of pain in the abdomen ☐ Dizziness ☐ Headache	 □ Bad-smelling, stronger, fouler or more pungent urine □ Dark urine □ Cloudier, milkier, smokier urine or increase in sediment/white discharge ■ Total "Urine Quality" Symptoms
☐ Increase in irritability (non-verbal children)	CONSTITUTIONAL
Increase in fatigue, lethargy, or weakness (non-verbal children) Total "Actionable" Symptoms	 ☐ Increase in fatigue, lethargy, or weakness ☐ Loss of appetite ☐ General sense of not feeling well ☐ Altered sleep patterns ☐ Increase in irritability (verbal children and adults)
BLADDER	Total "Constitutional" Symptoms
☐ Increase in burning, irritation, or pain when passing urine ☐ Increase in burning, irritation, or pain during catheterization ☐ Increase in incontinence or accidents ☐ Increase in urinary urgency ☐ Increase urine leakage ☐ Increase in catheterization frequency	ACHES & PAINS Muscle aches Increase in positional pain (sitting versus standing versus lying down) Increase or change in quality of pain in the lower back Increase or change in quality of pain in the legs
☐ Reduced urine volume during catheterization ☐ Blood in urine or pink urine	Total "Aches & Pains" Symptoms
☐ Reduced urine volume during catheterization	Total "Aches & Pains" Symptoms BOWEL & ABDOMINAL
☐ Reduced urine volume during catheterization ☐ Blood in urine or pink urine
